The 1K E-Coat Repair (ECR) Primer Aerosol provides a simple and efficient alternative to the conventional ways of painting over structural repairs! With properties similar to a 1K etch primer, it provides corrosion protection as well as excellent adhesion properties. For a glossier finish, the primer can be over coated with the 1K E-Coat Repair (ECR) Clear Coat.

Almost all OEM e-coat finishes can be closely matched to one of the 8 colours introduced. The variations in colour are due to bake temperatures of the E-coat. This product is ideal collision repairers, refurbishers and mobile repairers.

Features

- Ready for use - no need to spend time mixing, no wasted product, no clean up required.
- Can be used as a weld-through primer.
- Available in a 400ml aerosol can, with quality air nozzle, for quick and easy application.
- The adjustable nozzle allows you to select a wider or narrower spray fan to suit the job.
- Conveniently available in 8 shades, easily identified by the product's coloured neck.
- Quality Axalta branded product with proven performance.
